

AUTONOMOUS · DEFINED RISK · AUDITABLE

Propose. Prove. Execute.

An options agent that cannot risk a dollar until it writes why the trade exists, when it is wrong, and the maximum amount it can lose.

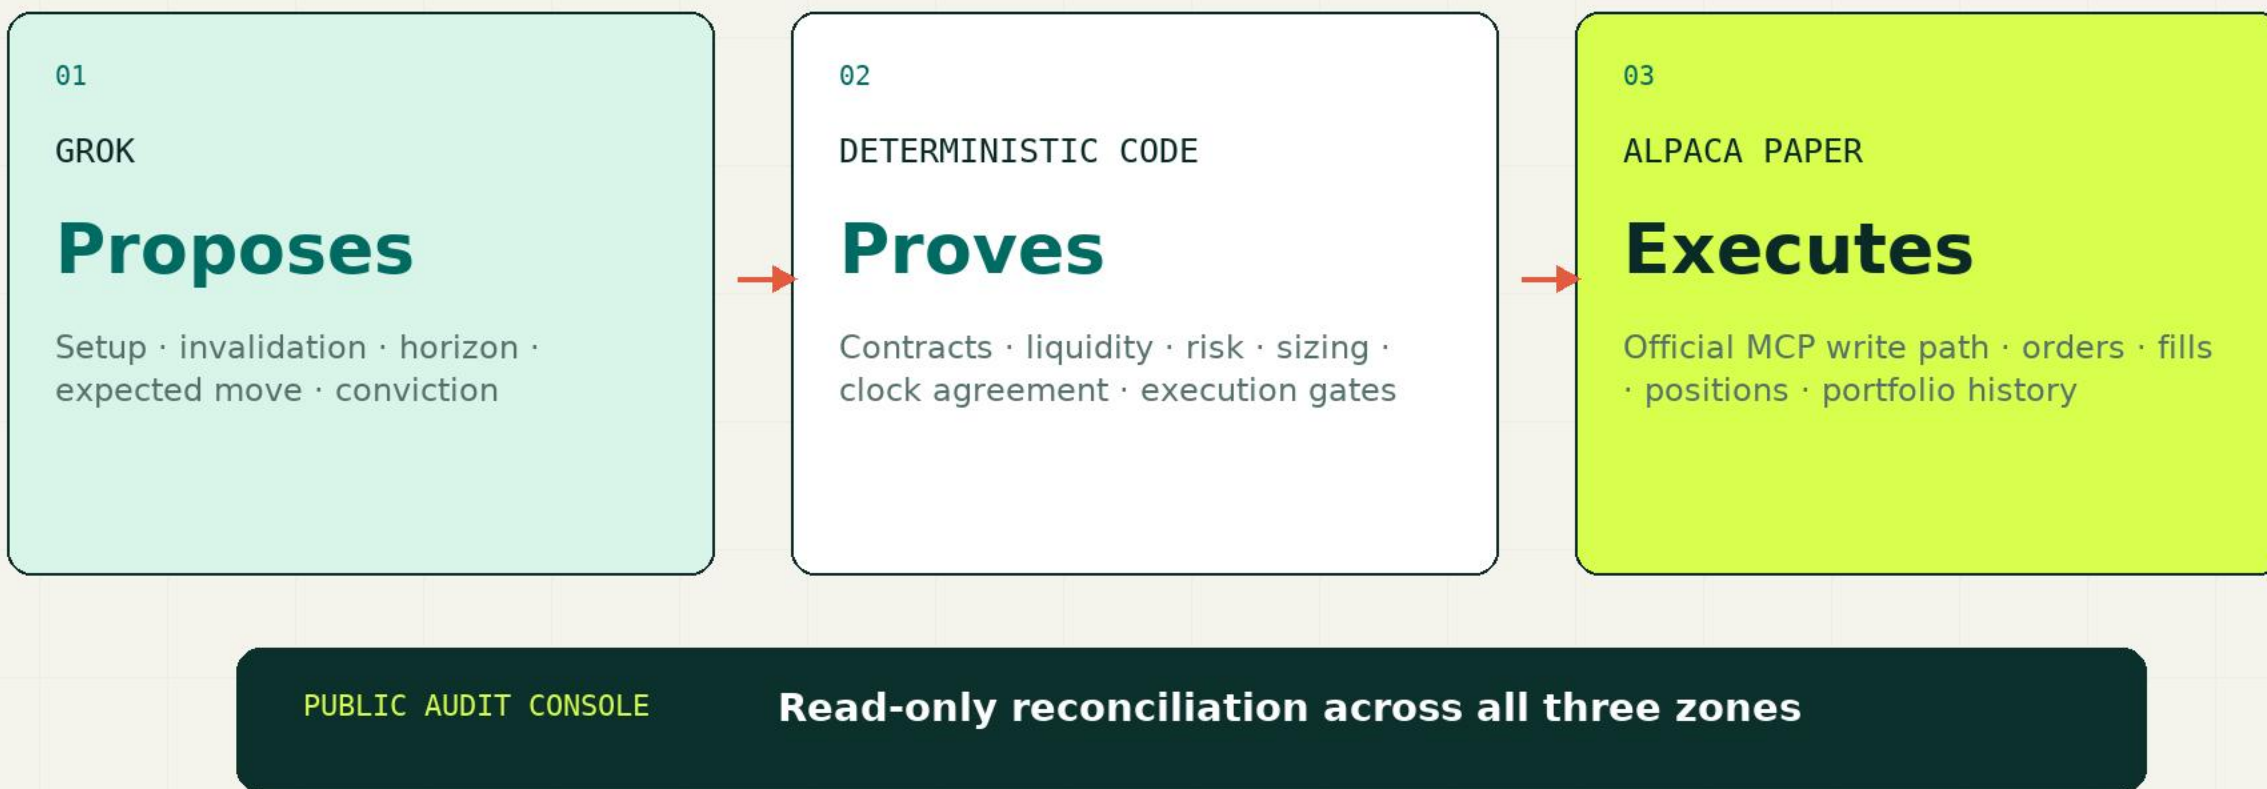

THE TRUST BOUNDARY

GROK	PROPOSES
CODE	PROVES
ALPACA	EXECUTES

Official Alpaca MCP · Grok · FastAPI · SQLite

One agent. Three trust zones.

Language is creative. Authority is deterministic. Evidence comes from the broker.

Scout wide. Ask narrowly.

The model never receives an unrestricted market search.

FULL UNIVERSE

29 liquid stocks + sector ETFs

STOCK EVIDENCE

Top five ranked underlyings

LIQUIDITY FILTER

No more than three option-feasible candidates

MODEL CONTEXT

One structured Grok thesis

Stock ranking first · option chains only for finalists · failed liquidity is evidence

A model request is not an order.

Code independently rebuilds the spread and can always refuse.

GROK RETURNS

A falsifiable thesis

- direction + regime
- setup + invalidation
- horizon + expected move
- volatility note + conviction

REQUEST ONLY

CODE ENFORCES

Hard gates before risk

- ✓ Paper endpoint + active account
- ✓ Options level 3 + clock agreement
- ✓ 14-45 DTE + two-sided quote quality
- ✓ Defined debit + contract identity
- ✓ $\leq 2\%$ equity per thesis
- ✓ $\leq 6\%$ aggregate risk + position cap
- ✓ Market open + explicit execution flag

One write path. Zero ambiguous retries.

The execution boundary is enforced in code—not delegated to the prompt.

READ EVIDENCE

- Account + positions
- Market clock agreement
- Stock + option data
- Orders + fills
- Portfolio history

ALLOW-LISTED + SANITIZED

ONLY WRITE

```
place_option_order
```

DAY LIMIT · MLEG · 1:1

**No CLI write. No SDK write.
No silent fallback.**

TERMINAL OUTCOMES

- Timeout
- Malformed response
- Missing order ID
- Ambiguous result
- Broker rejection

NEVER RETRIED

One read-only screen proves what happened.

The page cannot submit, replace, cancel, or close an order.

Prove. Execute.

A judge-facing record of the trading path: Grok supplies the thesis, deterministic gates control risk, and Alpaca paper infrastructure confirms what occurred.

CONTROL SURFACE / READ ONLY

READY RECORD

NO BROKER WRITES FROM THIS PAGE

READ ONLY Execution is off. This dashboard performs broker reads only. Execution is disabled on this dashboard host.

Readiness ledger

READY

A startup claim is only as strong as its proof.

Account ****C6LZ · Fresh — no fills recorded · market closed

PASS	Paper-only endpoint	Alpaca paper trading
PASS	Account active	ACTIVE
PASS	Demo baseline	\$100,000.00
PASS	Options level 3	level 3
PASS	Broker reads healthy	0 fills; market closed

AUDIT, NOT CONTROL

Thesis · gates · MCP trace · broker state · P&L

The proof includes a safe refusal.

Live paper-account and MCP checks passed. Deterministic scouting stopped the cycle.
